## We provide Consulting and Support Services for your Digital Transformation Roadmap Development & Implementation.

We work hand in hand with your organization to develop your Digital Transformation Roadmap to meet your ROI and Reliability goals. Areas that we focus on include:

- Equipment performance trends and failure data
- Technical specifications for online condition monitoring systems
- Selecting appropriate sensors, instrumentation, and data acquisition hardware
- Coordinating installation, integration, and commissioning activities
- Ensuring compatibility with existing control systems and data platforms
- Developing configuration standards for alarms, thresholds, and analytics
- Supporting validation, testing, and performance verification Advanced Pattern Recognition Model Development and Implementation

### Our Process

Before you can begin your monitoring journey our team will meet with you to determine your goals, needs and priorities. We will work with you to develop a plan of attack that suits your budget, ROI requirements and timeframe. A typical plan includes the following steps

- ⇒ Equipment Prioritization
- ⇒ Sensor Identification GAP Analysis
- ⇒ Sensor Specification & Installation
- ⇒ IT Integration - Data Mapping (PI, Maximo, Oracle, etc.) as required
- ⇒ On-Line Monitoring Services
- ⇒ Work Process Integration
